DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The Ludington Building is located on the southwest corner of Wabash Avenue and 11th Street in Chicago. Adjacent to the rear alley wall of the building is the Jackson Park-Englewood Elevated line which is part of the "Alley Elevated" railroad system begun in 1891.

Jenney's building has 8 stories with one basement. It is constructed with a steel frame and spread foundations that were designed to carry an additional eight stories. ¹ It is faced on the two street sides (east and north) in terra cotta and stone, now painted. The rear of the building and south party wall are of common brick. An original loading dock abuts the west facade on the alley.

The street facades of the Ludington Building have a large proportion of glass in simple mullions and spandrels that create cage-like cells with a strong rhythm. They clearly demonstrate Jenney's training as an engineer, in contrast to the work of some of his contemporaries who relied heavily on applied ornament. As with traditional Chicago School buildings the ornamentation is concentrated at the lower level and the roofline. An ornamented beltcourse is found above the shopfronts; the roofline consists of an ornamented cornice and entablature. Verticle emphasis is given by a very thin quoin at each corner. This detailing is also seen by the use of very thin pilasters on each side of each corner bay and flanking the center tier of bays above the front door, centered in the east facade. The windows, grouped in pairs in each bay, are double hung.

The building continues to be used as office space. Because Jenney employed the most up-to-date building methods of the day and equipped the Ludington with the latest amenities including three passenger and two freight elevators, it was called "first class in all respects" in the Chicago Daily News and Political Digest of 1893, p. 386.

The exterior is intact including the cornice and original shop fronts (which are becoming rare in Chicago). The entrance is the only major exterior element that has been altered, apparently modernized in the 1950s or 1960s. Four small arches are shown in the sketch of the Ludington published by <u>Inland Architect</u>, August 1892 which may be concealed behind the building sign over the entry, altered already in the 1940s. Except for its being painted and the front entrance alteration, the building retains virtually the same appearance as it did 85 years ago.

STATEMENT OF SIGNIFICANCE

The significance of the Ludington Building is based upon its remarkable design by the father of the Chicago School of Architecture, William LeBaron Jenney. Its importance in architectural history has increased in recent years with the destruction of many of Jenney's other major works.

William LeBaron Jenney is considered the founder of the Chicago School of Architecture with his invention of steel skeleton construction of tall buildings. It is from his work that the later Chicago School buildings sprang. Importantly, he trained many of the major Chicago architects including Louis Sullivan, Martin Roche, William Holabird and Daniel Burnham. 1 Jenney was also prominent as the architect and engineer of the West Park system from 1869 to the 1890s.

Jenney designed seven office and store buildings of importance in central Chicago, including the Ludington. Only three survive intact. The six buildings other than the Ludington are:

- Leiter I Building (1879). Demolished.
- · Home Insurance Building (1885). Demolished.
- · Leiter II Building, now Sears Roebuck store (1890).
- * Fair Store (1890), facades removed and replaced with modernization.
- ' Manhattan Building (1891), currently empty of all tenants.
- · Isabella Building (1893), ground floor demolished and top floor removed.

At the time of construction, the Ludington was one of five office structures Jenney was simultaneously building in the Loop.

Among the buildings of Jenney the Ludington holds a crucial position. Carl Condit has stated:

The most crisp and elegant treatment of the elevations in all of Jenney's designs appears in the Ludington Building... Through its regularity and harmony, and its unusually slim piers and spandrels, the light and open and graceful wall that is possible with steel framing is given full expression... The base of the Ludington is unusually fine: the narrow piers and the wide, undivided window panes set flush show how far Jenney could exploit the steel frames for lively architectonic effect. 2

Nelson Ludington, a lumberman from Escanaba, Michigan, employed Jenney to build this structure. It was owned by the family until 1960 when Warshawsky and Company, dealers in automobile accessories, purchased it.
